

MSC TRUST

Inventory System

Official User Manual

1. Main Dashboard

The Dashboard is your central hub for inventory management. From here, you can view the overall health of the inventory system, track items by location (Branch & Block), and monitor low-stock alerts.

Key Features:

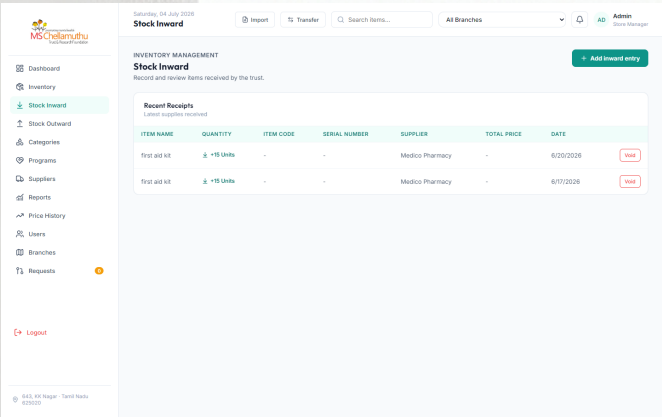

- **Sidebar Navigation:** Access Requests, Categories, Programs, and Branches.
- **Inventory Table:** View Item Code, Name, Location, and Stock levels.
- **Action Buttons:** Perform Stock Inward, Outward, and Transfers directly from the top bar.

2. Stock Movements

Accurate stock movements are critical. Use the **Stock Inward** modal when new supplies arrive, and the **Stock Outward** modal when supplies are consumed or distributed.

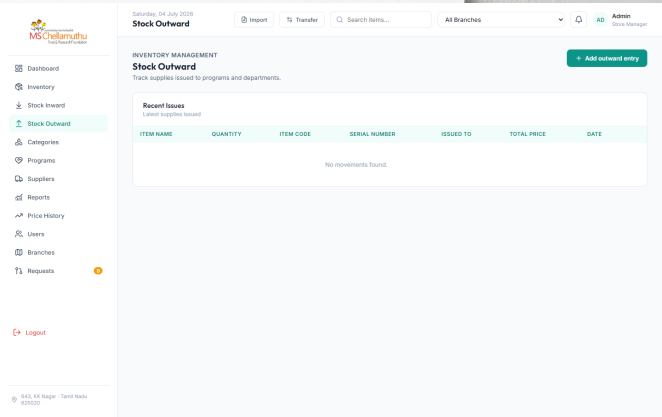

Stock Inward

Select an item and enter the quantity received. The Item Code and Serial No. will auto-populate.

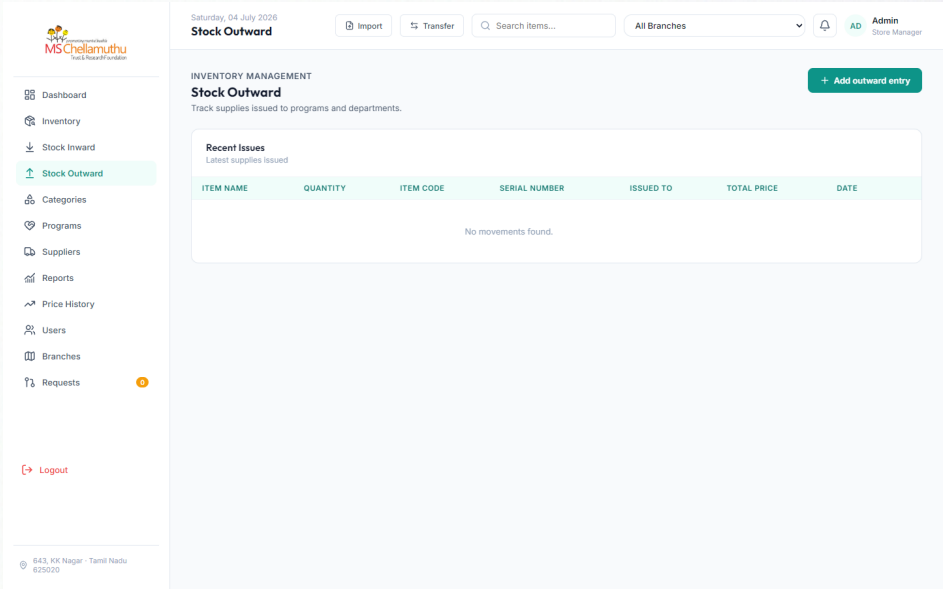

Stock Outward

Select an item and enter the quantity consumed. Enter a reason (e.g., 'Daily Use').

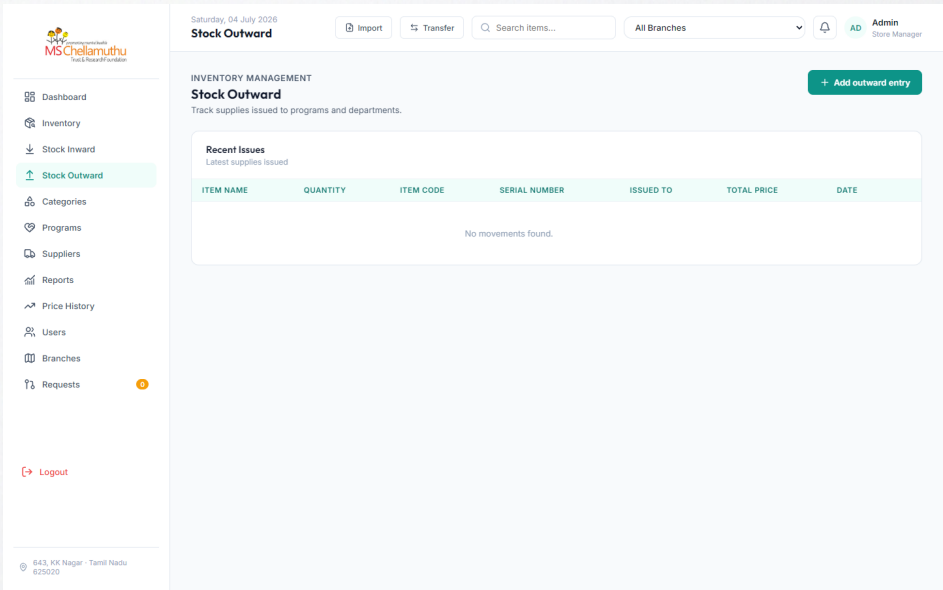

3. Branch & Block Transfers

To move items between specific blocks or entirely different branches, use the Transfer Stock feature. Moving items to a different branch generates a pending request for Admin approval.

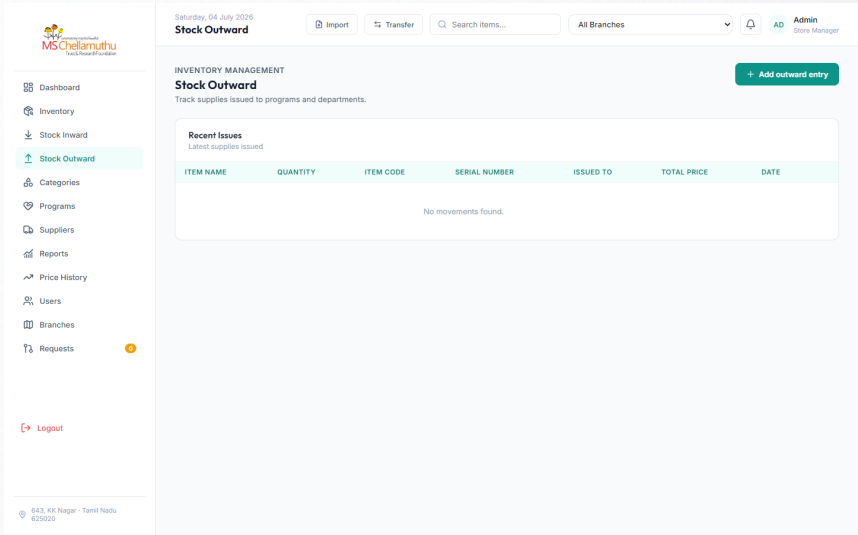

4. Bulk Import (Excel)

For large initial setups, you can upload an Excel (.xlsx) file to instantly populate the inventory. Download the template provided in the modal to ensure correct formatting.

5. Admin Requests Panel

Administrators must approve or reject pending Branch Transfers and Deletion requests. The unified Requests panel provides a clear overview of all pending actions.

6. Branch & Block Management

Admins can configure Branches and their respective Blocks (e.g., specific rooms, wards, or storage closets). This enables granular location tracking for all inventory items.
