System Overview & New Features

Welcome to the **MSC Trust Inventory System**. This system is designed to seamlessly track supplies, equipment, and materials across all branches of the MSC Chellamuthu Trust & Research Foundation.

Features -

The system has been significantly upgraded to provide more granular control and a smoother user experience:

Blocks within Branches

Track items by Branch, with specific "Blocks" (e.g., Block A, Block B). The main inventory table features a **Location** column detailing both Branch and Block.

Item Codes & Serial Numbers

Precise tracking is here. Every item can have a unique Item Code and Serial Number, which automatically populates when recording stock movements.

Smart Bulk Import

Uploading an Excel file? If your sheet contains new Branches or Blocks, the system will automatically create them for you on the fly.

Admin vs. Staff Roles

Admins have full visibility across all branches, can approve transfers/deletions, and manage users. **Staff** can only view and manage inventory for their assigned branch.

2 Navigating the Dashboard

The Dashboard provides an immediate snapshot of your inventory health, showing total items, available stock, and low stock alerts.

Figure 2.1: The main Dashboard view highlighting the Location column.

Understanding the Main Inventory Table

The central table displays your products. Key columns to note in v2.0:

- 1 **Location:** Shows the Branch name on top, and the specific Block underneath (e.g., "General", "Block A"). If an item is stored in multiple blocks, they will be listed here.
- 2 **Item Code & Serial No:** Displayed prominently for quick identification.
- 3 **Stock Level:** A visual progress bar showing current stock versus the minimum threshold.

3 Managing Inventory & Locations

Adding a new item to the system is quick and categorizes the product correctly for reporting.

- 1 Click the **Add Item** button on the Dashboard.
- 2 Fill in the essential details: Item Name, Category, Minimum Threshold, and Unit.
- 3 **Tracking Info:** Enter the optional *Item Code* and *Serial Number* if applicable.
- 4 **Initial Stock & Location:** Set the initial stock quantity. You can select the specific **Branch** and the specific **Block** where this initial stock will be placed.
- 5 Click **Save Item**.

Automatic Stock Inward

When you add an item with an initial stock greater than 0, the system automatically creates a "Stock Inward" record in the background for perfect auditing.

Recording Stock Inward / Outward

Whenever new stock arrives or stock is consumed/issued, it must be recorded using the Stock Inward or Stock Outward buttons.

Record Stock Inward

Select an Item

- Core Widget Pro ✓
- Standard Widget
- Elite Widget
- Nano Component A

Serial No.

Enter serial number, e.g., CW012345678

Quantity

25 units

Supplier

Apex Supply Solutions Inc.

Reference Notes

Initial batch from January order. Checked and verified.

Save Stock Inward + Cancel

Figure 4.1: The Stock Inward form with auto-populating fields.

The Auto-Populate Feature NEW

To speed up data entry and reduce errors, v2.0 introduces smart dropdowns:

- 1 Navigate to the **Stock Inward** or **Stock Outward** page and click "New Movement".
- 2 Click the **Select an item** dropdown. You will now see the Item Name alongside its [Code] and [Serial No] directly in the list.
- 3 Once you select an item, the **Item Code** and **Serial No.** fields in the form will **automatically populate** with the correct data!
- 4 Enter the quantity, reference notes, and click Save.

5 Branch & Block Transfers

Moving items physically means moving them digitally. You can transfer items within the same branch (between blocks) or to a completely different branch.

How to Transfer Stock

- 1 Click the **Transfer Stock** button on the Dashboard.
- 2 Select the **Source Branch** and the item you wish to transfer.
- 3 Enter the quantity.
- 4 Select the **Destination Branch** and the specific **Destination Block**.
- 5 Add any reference notes and submit.

Transfer Approvals

If you are a Staff member transferring to a different branch, the transfer goes into a **Pending** state. An Admin must approve it before the stock is officially moved. (Transfers within the same branch happen instantly).

Managing Requests (Unified Panel)

For Admins, managing staff requests is now centralized in a single location called **Requests** on the sidebar.

Pending Transfers

View all branch-to-branch transfers requested by Staff. You can review the quantities and click **Approve** or **Reject**.

Deletion Requests

Staff cannot permanently delete items. They submit a deletion request. Review the reason provided and choose to **Approve** (permanently delete) or **Reject**.

Note: Completed transfers are now logged under the Stock Outward (Recent Issues) table as "Transfer" history.

7

Smart Bulk Import

If you have hundreds of items in an Excel sheet, Bulk Import is the fastest way to add them.

- 1 Go to the Dashboard and click **Bulk Import**.
- 2 Download the provided **Excel Template**.
- 3 Fill in the template. The template includes columns for Branch, Block, Item Code, and Serial No.
- 4 Upload the completed file.

Auto-Creation Magic

If you type a Branch or Block name in the Excel sheet that does not currently exist in the system, the Bulk Import tool will **automatically create** those new Branches and Blocks for you during the upload! No manual setup required.

8 Admin: Users & Branches

Admins have access to the Settings panel at the bottom of the sidebar.

- 1 **Users:** Create new staff accounts, assign them to specific branches, and reset passwords. (Staff cannot reset their own passwords).
- 2 **Branches & Blocks:** Create new physical locations. Click on a Branch to manage the specific Blocks (e.g., Rooms, Shelves, Wards) inside it.
- 3 **Categories & Programs:** Maintain the dropdown lists used throughout the system to keep data clean and standardized.
